

READMISSION OF DIABETIC PATIENTS

SUMMARY

- Purpose of the project
- Why diabet ?
- What is diabet ?

INTRODUCTION AND CENTRAL Q°

How to predict the readmission of diabetic patients?

HYPOTHESIS

The readmission of diabetic patients is surely linked to the age, the weight, and eventually to the social level of the patient

OBJECTIVES

- predict the readmission of diabetic patients
- study different correlations

METHODS

- PCA
- Data visualisation
- Classification metrics

CONCLUSION

- ethnicities and age play a major role in readmission.

RESULTS

- link between time in the hospital and the number of medications
- different correlations
